22nd January 2018

Dear Customer,

The Steel which we make at Chandan Steel Ltd., is made from the 80% recycled material and rest 20% are Ferro Alloys.

The 80% recycled material are waste material arising out of household, commercial & Industrial activities which can no longer be used for the intended purpose.

Melting process is done by Electric Furnace which is fed by charges of scrap selected on the basis of various steel grades as per the International norms. Melt heat is rolled in wire rod, round bar, hex bar, square bar, flat bar, angle bar, channel or forged for various sizes as per customer requirement.

For any further clarification, one can contact undersign directly or through website.

Chandan Steel Ltd.
